## Through Evolution To Revolution

The new WALTHER **KK500** is a significant extension to the proven small-bore range of the KK300 model series for top marksmen. Thanks to its special technical features, unequalled shooting precision, new trigger and new ergonomic stock, the rifle is designed primarily for shooters competing at the national and international level. The use of high-grade materials and precise workmanship down to the smallest detail ensure you will have a competition rifle of the highest quality for many years to come.

**WORLD'S FIRST**

### EXPERT Aluminum Stock

The possible adjustments to the new **KK500** aluminum stock are as individual as the human body. So the individual shooter doesn't have to adjust to the rifle, instead the rifle can be adjusted to the shooter. The continuously adjustable fore-end, the three different grip sizes each with two different grip geometries, [the slimline ALL-IN-ONE cheekpiece with interchangeable rounded or edged contact surface](#), the butt stock offsettable using a parallelogram joint, and the newly designed and sturdy EXPERT hook butt plate – all of these ensure a perfect firing position for consistent accuracy.

### AMBI Action System

In competitive shooting, it's a crucial advantage when the shooting position doesn't have to be changed to reload the rifle. So it's useful, for example to a right-hander shooting in a standing position, to be able to reload using the left hand. With the AMBI Action System (patent pending), you now have this option for the first time: [If required, the bolt lever can be moved from left to right in an easy process](#) in seconds flat and without any tools at all.

### Designed with top marksmen

### KK500 features as video clips

**Peter Sidi** – world champion, multiple European champion and world cup winner.

All features of the **KK500** are available as video clips on our YouTube Channel CarlWaltherTV.

### EXPERT Match Trigger

### BACKTAKE Bolt

### Alloy Steel Match Barrel

The ball-bearing-mounted WALTHER match trigger with trigger stop is, with a resistance as low as 50 g, already very close to perfection. Anyone who'd like „more“, or in other words less, will have from 2016 onwards the alternative of the wear-free electronic trigger already proven in the LG400 air rifle, down to an ultra-light 15 g release weight. Thanks to the modular design, you don't need to commit at once, as you also have the option to replace the trigger unit any time later on.

Many shooters prefer a **breech positioned farther back in the receiver**, combined with a short bolt allowing easier loading. For example in the prone position, the supporting elbow stays in the same place. The **KK500** offers the optimum solution here – just make the comparison. No awkwardness when inserting the round into the chamber: simply place it in the breech and gently close the bolt using the optimized cocking cam.

Many top national and international shooters can credit WALTHER guns with their success over the past decades, thanks to their already legendary performance. It's also important that their precision remains at this high level over many years. The proven Walther match barrel of alloy steel in a tension-free and vibration-resistant mounting, continues that tradition.

### What's inside is what counts

Many advanced details in the **KK500** assist you all the time when shooting, but can't be discerned immediately at first sight: a short and weight-optimized firing pin with ignition at the bottom of the cartridge rim ensures a very short shot release time and a more consistent combustion behavior by the round. This helps to improve the rifle's grouping ability.

Slightly diverging dimensions in different ammunition can, in rare cases, affect the loading operation. This can be compensated for if required by a factory-settable headspace.

### Everything's included

With the **WALTHER KK500**, you get not only a modern and technologically advanced match rifle with outstanding shooting performance, but also accessories optimally adjusted to it – and all that as standard at no extra cost:

INSIGHT-OUT match diopter, Centra SCORE front sight tunnel, BLOCK CLUB sight riser blocks, adjustable fore-end and MEC hand stop, lockable case, and the newly designed and sturdy EXPERT hook butt plate, to name but the most important ones.

### Technical Data

<b>Caliber</b>	.22 l.r.
<b>Trigger</b>	M-trigger (mechanical trigger)
<b>Trigger weight</b>	50 – 130 g
<b>Length of sight</b>	640 – 880 mm
